

REACH Conformity

Schaltungsdruck Storz GmbH + Co KG is a manufacturer and distributor of unpopulated printed circuit boards, in the sense of the REACH regulation, a so-called downstream user. We only manufacture non-chemical products that do not release any substances when used as intended. For so-called reasons, the products manufactured by us are neither subject to registration nor to the obligation to prepare/issue safety data sheets.

We check at regular intervals whether our products contain substances that are classified as substances of very high concern by the European Chemicals Agency (ECHA) and published in the form of the so-called candidate list. We check at regular intervals by requesting proof of registration in accordance with REACH for the manufacture of bare printed circuit boards from all manufacturers/suppliers from whom we purchase preliminary products and/or chemicals as well as from partners of our extended workbench.

Last time for the extension of the new candidates of echa.europa.eu from **23.01.2024**
<https://echa.europa.eu/de/candidate-list-table>

As things stand at present, our printed circuit boards do **not contain** any substances on the candidate list in concentrations above the specified limits (0.1%).

However, our **assembly print (black)** contains a **reportable proportion of TPO**. The black assembly print will be replaced at the beginning of 2025.

However, in accordance with Article 33 of the REACH Regulation, we will inform you immediately if our products contain substances on the candidate list in concentrations above the permitted limit.
